Adobe today announced new Lightroom updates for Lightroom for iOS and Lightroom for Mac. In Lightroom iOS (and Android), a new Home view gives you access to the latest photos, interactive tutorials and inspirational photos, providing ideas and steps to implement ideas. Adobe's new lightroom interactive tutorials walk you through each edit step by step, allowing you to change sliders using Adobe guidance and instructions. Use inspirational photos to see how a photo was taken with a list of available detailed edits. Open the Edit control to open the wheel on which you can scroll through edits and see which settings you've used. Interactive tutorials and inspirational photos are limited to Adobe's mobile Lightroom apps at the current time, but will arrive on Macs in the future. Adobe for Mac gets an updated Help experience that provides more searchable information about each device, as well as built-in tutorials. All versions of Lightroom have updated collaboration features starting today asking others to add photos to the album. You can also share a link that allows guests to request access to an album. Also new to each version of Lightroom is a Texture tool that highlights or smooth medium-sized details like skin, bark, and hair. It can smooth out the skin without affecting pores or accentuating hair without increasing the presence of noise because it is specially designed for medium-sized details. On the Mac, there's a new Defringe feature designed to remove purple or green edges caused by chromatic lens aberrations. For Lightroom Classic, the plug-in's flat field correction is now integrated into the Library module. This is a feature designed to correct sensor and lens characteristics that can cause asymmetric color projections. Lightroom for iOS can be downloaded from the App Store, while Lightroom for Mac is available from Adobe as part of Photography's specific and complete Creative Cloud software packages.
